# 引言

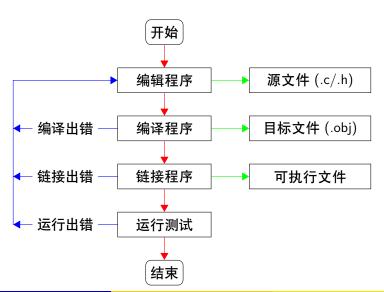

① C 语言介绍

```
#include <stdio.h>
int main(void)
         int n;
         int factorial(int n);
         scanf("%d", &n);
         printf("%d\n", factorial(n));
         return 0;
int factorial(int n)
         int i, fact = 1;
        for (i = 1; i \le n; i++)
                 fact = fact * i:
```

```
2 int main(void)
3 {
          int n;
          int factorial(int n);
6
          scanf("%d", &n);
          printf("%d\n", factorial(n));
          return 0:
9 }
1 int factorial(int n)
.2 {
3
          int i, fact = 1;
          for (i = 1; i \le n; i++)
                   fact = fact * i;
6
          return fact;
.7 }
```

1 #include <stdio.h>
